We claim

1.(Currently amended) A dual ended container comprising a sleeve that has a first end and a second end, said first and second ends having a generally circular cross section along the entire length of said sleeve, and wherein the diameter of said sleeve does not vary along its length each of said ends of said sleeve being adapted to receive a receptacle for containing a product so that said sleeve is between a first and second receptacle and wherein the first receptacle has a means for applying a product that is different from the means for applying a product in the second receptacle[s] and at least one of the receptacles is a container having a first end and a second end, at least one end of said receptacle having a rollerball applicator for dispensing product from said receptacle, said end of said receptacle having said rollerball applicator extending into one end of said sleeve and being removably connected to one end of said sleeve, said second end of said sleeve, having a rod extending therefrom and wherein said rod has a doe foot applicator attached thereto, said rod extending from generally the center of the orifice formed by said sleeve, said second end further having a receptacle removably connected to said sleeve, and wherein said receptacles are generally circular in cross section, said receptacles having a diameter and wherein the diameter of said first receptacle and said second receptacle are generally the same diameter as the diameter of said sleeve and wherein said receptacles have a sidewall and wherein said sidewall of the first receptacle is generally parallel to the sidewall of the second receptacle; and said receptacles having an end wall, said end walls of said receptacles being generally parallel to each other and perpendicular to said sidewalls.

09/842,371

2. (Currently Amended) The dual ended container of claim 1 wherein the sleeve has a first section and a second section which are connected by a sidewall, said sidewall extending across the cross section of said sleeve said first section and the second section being opened at each of said ends and threaded so that they are adapted to receive a threaded end of a receptacle which contains a product.

3.(Currently Amended) The dual ended container of claim 1 wherein the sleeve has a first section and a second section which are connected by a sidewall, said sidewall extending across the cross section of said said first section and the second section being opened at each of said ends and being adapted to receive an opened end of a receptacle which contains a product.

4. (Original) The dual ended container of claim 3 wherein the sleeve and the receptacles have a cross section of the same shape.

5. (Original) The dual ended container according to claim 4 wherein the first section and the second section each have a conventional threaded cap inserted in the sleeve such that the caps are in a head to head relationship.

6. (Original) The dual ended container according to claim 4 wherein the center axis of each end section is the same.

7. (Original) The dual ended container according to claim 6 wherein the center

09/842,371

axis of the sleeve and each of the receptacles are the same.

8.(Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a product containing a fragrance and the other receptacle has a doe foot applicator for applying an eye product contained in said receptacle.

9. (Original) The dual ended container according to claim 8 where the product containing a fragrance is a perfume.

10. (Original) The dual ended container according to claim 9 wherein the eye product is an eye liner.

11.(Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a product containing a fragrance and the other receptacle has an applicator for applying an facial product contained in said receptacle.

12. (Original) The dual ended container according to claim 11 where the product containing a fragrance is a perfume.

13. (Original) The dual ended container according to claim 12 wherein the facial product is a powder.

14. (Original) The dual ended container according to claim 12 wherein the facial product is a cream.

15. (Original) The dual ended container according to claim 12 wherein said facial product is a concealer.

16. (Original) The dual ended container according to claim 12 wherein said facial product is a blemish control material.

17. (Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a product containing a fragrance and the other receptacle has an applicator for applying an nail product contained in said receptacle.

18. (Original) The dual ended container according to claim 17 where the product containing a fragrance is a perfume.

19. (Original) The dual ended container according to claim 18 wherein the nail product is a nail polish.

20. (Original) The dual ended container according to claim 18 wherein the nail product is a hardener.

09/842,371

21. (Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a facial product contained in said receptacle.

22. (Original) The dual ended container according to claim 21 wherein the facial product is a powder.

23. (Original) The dual ended container according to claim 21 wherein the facial product is a cream.

24. (Original) The dual ended container according to claim 21 wherein said facial product is a concealer.

25. (Original) The dual ended container according to claim 21 wherein said facial product is a blemish control material.

26. (Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a cosmetic serum.

27. (Original) The dual ended container according to claim 21 wherein the second receptacle contains nail product and an applicator for applying said nail product.

28. (Original) The dual ended container according to claim 27 wherein the applicator is a brush.

29. (Original) The dual ended container according to claim 21 wherein the second receptacle contains an eye product and an applicator for applying said eye product.

30. (Original) The dual ended container according to claim 29 wherein said applicator is a mascara brush.

31. (Original) The dual ended container according to claim 29 wherein said applicator is a doe foot applicator.

32. (Withdrawn) The dual ended container according to claim 29 wherein said applicator is a rollerball.

33. (Withdrawn) The dual ended container according to claim 11 wherein said second receptacle containing a facial product has a rollerball applicator.

34. (Withdrawn) The dual cosmetic container according to claim 1 wherein both of the receptacles have rollerball applicators and contain products containing a fragrance.

09/842,371

35. (Withdrawn) The dual cosmetic container according to claim 1 wherein both of the receptacles have rollerball applicators and both receptacles contain facial products.

36. (Withdrawn) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a first lip product and the other receptacle has a rollerball applicator for applying a second lip product contained in said receptacle.

37. (Withdrawn) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a lip product and the other receptacle has a rollerball applicator for applying a facial product contained in said receptacle.

38. (Withdrawn) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a lip product and the other receptacle has a rollerball applicator for applying a product having a fragrance contained in said receptacle.

39. (Withdrawn) The dual ended container according to claim 1 wherein the receptacle having a rollerball applicator contains a lip product and the other receptacle has a rollerball applicator for applying an eye product.

40. (Currently amended) The dual ended container according to claim 1 wherein the receptacle having [a] said rollerball applicator contains a lip product and the other receptacle has an applicator for applying an eye product.

41. (Previously presented) The dual ended container according to claim 1 wherein the receptacle having the rollerball applicator contains a lip product and the other receptacle has an applicator for applying a nail product.

42. (Currently amended) A dual ended container comprising a sleeve that has a first end and a second end, so that said sleeve is between a first and second receptacle, each of said ends being adapted to receive a said receptacle for containing a product and wherein the product in the first receptacle is different from the product in the second receptacle and at least one of the receptacles has a rollerball applicator for dispensing product from that receptacle, said receptacle with said rollerball applicator having a first end and a second end, said first end having said rollerball applicator, said first end extending into said sleeve and being removably connected to said sleeve and wherein said sleeve has a diameter and said receptacles have a diameter and wherein the diameter of said sleeves and said receptacles are generally the same, and where said receptacles have a sidewall and where the sidewall of said first receptacle is parallel to the sidewall of said second receptacle; and said receptacles having an end wall, said end walls of said receptacles being generally parallel to each other and perpendicular to said sidewalls.

43. (Previously presented) The dual cosmetic container of claim 42 wherein both receptacles contain facial products.

09/842,371

44.(Previously presented) The dual ended container of claim 42 wherein the receptacle having the rollerball applicator contains a first lip product and the other receptacle has a second lip product contained in said receptacle.

45.(Previously presented) The dual ended container according to claim 42 wherein the receptacle having the rollerball applicator contains a lip product and the other receptacle has a facial product contained in said receptacle.

46.(Previously presented) The dual ended container according to claim 42 wherein the receptacle having the rollerball applicator contains a lip product and the other receptacle has a product having a fragrance contained in said receptacle.

47.(Previously presented) The dual ended container according to claim 42 wherein the receptacle having said rollerball applicator contains a lip product and the other receptacle has an eye product.

48.(Previously presented) The dual ended container according to claim 42 wherein the cross section of the receptacle having said rollerball is the same as the cross section of the other applicator receptacle.

49. (Previously presented) The dual ended container according to claim 48 wherein the cross section of the receptacles is round.

50. (Cancelled) The dual ended container according to claim 49 wherein the diameter of the cross section of the receptacles is different.

51. (Withdrawn) A dual ended container comprising a sleeve, said sleeve having a first end and a second end, said second end having a generally circular cross section along the entire length of said sleeve, and wherein the diameter of said sleeve does not vary across its length, each end of said sleeve being adapted to receive a receptacle for containing a product and wherein the product in the first receptacle is different from the product in the second receptacle and at least one of said receptacles is a container having a first end and a second end, at least one end of said receptacles having a rollerball applicator for dispensing product from said receptacle, said end of said receptacle having said rollerball applicator being removably connected to one end of said sleeve, said second end of said sleeve having a rod extending therefrom and wherein said rod has a doe foot applicator attached thereto, said rod extending from generally the center of the orifice formed by said sleeve, said second end further having a receptacle removably connected to said sleeve, and wherein said receptacles are generally circular in cross section, said receptacles having a diameter and wherein the diameter of said first receptacle and said second receptacle are generally the same diameter as the diameter of said sleeve and wherein said receptacles have a sidewall and wherein said sidewall of the first receptacle is generally parallel to the sidewall of the second receptacle.
